$\qquad$ Period: $\qquad$ Date: $\qquad$

## Perimeter, Circumference, and Area Guided Notes

1. The perimeter of the shape refers to the length of its $\qquad$ boundary $\qquad$ .
2. The perimeter of a square is $\qquad$ 4 times the length. A square having a perimeter of 36 cm will have a side length $\qquad$ .

3. The perimeter of a rectangle is given by the formula $\qquad$ $2 \times($ length + width $)$ $\qquad$ .

A rectangle having length 8 cm and width 5 cm will have a perimeter of $\qquad$ .

4. The circumference of a circle is given by the formula $\qquad$ $2 \pi r$ $\qquad$ . If the radius of a circle is 8 cm , its circumference is $\qquad$ $16 \pi$ $\qquad$ .

5. The $\qquad$ area $\qquad$ of a shape defines the space within the boundary of that shape. The area of a rectangle is $\qquad$ length $\times$ $\qquad$ width $\qquad$ A rectangle having Area of $36 \mathrm{~cm}^{2}$ and length of 9 cm has a width of $\qquad$ .

$\qquad$ Period: $\qquad$ Date: $\qquad$

## Perimeter, Circumference, and Area Guided Notes

6. The area of a triangle is given by the formula $-\frac{1}{2} \times$ base length $\times$ height __. The triangle shown in the figure below has an area $\qquad$ $48 \mathrm{~cm}^{2}$

7. The area of a circle has the formula $\qquad$ $\pi r^{2}$ $\qquad$ The area of the circle shown below is $\qquad$ .

8. The area of a square has the formula $\qquad$ (length) ${ }^{2}$ $\qquad$ .The length of the square with area $100 \mathrm{~cm}^{2}$ is $\qquad$ 10 cm _.
