

Copy an angle

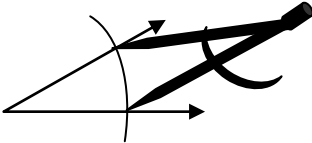

- 1st Swing an arc cutting both sides of the angle.

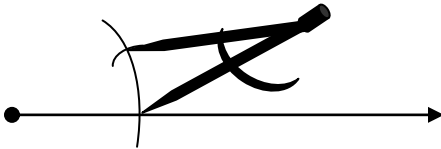

- 2nd Swing the same arc from the endpoint of a working ray.

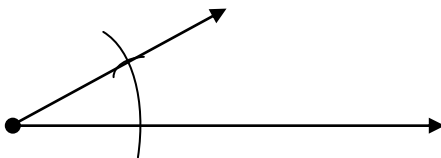

- 3rd Measure the span of the original arc on the given angle.

- 4th Measure and mark that same span on the working ray and working arc.

- 5th Draw the ray for the other side through the intersecting arcs.

You try!

Copy the angle below.
