## Tangent Lines Bell Work

Solve problems involving tangent of a circle.

Consider a pair of concentric circles with center O and complete each statement.

1. Suppose that p is tangent to the circle. Then $m \angle O A D=$ $\qquad$ _.
2. Suppose that $m \angle O C E=90^{\circ}$. Then q is $\qquad$ to the circle at C .
3. Suppose that q is tangent to the circle at C and that $\mathrm{p} \| \mathrm{q}$. Then $m \angle C A D=$ $\qquad$ -

$A B$ and $A D$ are tangent segments from $A$. Complete each statement.
4. $\mathrm{AD}=$ $\qquad$
5. $m \angle B A C=$ $\qquad$

## Tangent Lines Bell Work

$A B$ is a tangent segment from $B$. Complete each statement.
6. $m \angle O A B=$ $\qquad$ 7. If $\mathrm{AB}=12$ and $\mathrm{OA}=5$, then $\mathrm{OB}=$ $\qquad$ .
8. If $m=\angle A B O=25^{\circ}$, then $m \angle A O B=$ $\qquad$ .

9. Tell whether TN is a tangent to $\odot \mathrm{G}$ at A if $\mathrm{GA}=12$, $\mathrm{AN}=5$ and $\mathrm{GN}=13$.
10. Given that $\mathrm{GA}=4.3, \mathrm{AT}=3.2$ and $\mathrm{GT}=5$, tell whether TN is a tangent to $\odot G$ at $A$.
